

Name: 4-hydroxybenzoyl-CoA thioesterase

Function: 4-hydroxybenzoyl-CoA thioesterase (4HBT) catalyses the final step of 4-chlorobenzoate degradation pathway. In this step 4-chlorobenzoate is converted to 4-hydroxybenzoate.

Information is from CDD.

Source: This protein doesn't have a Swissprot number in NCBI page. We did the BLAST against Swissprot database but the e-values were too high to be considerate.

4HBT protein is described on Brenda, in many different organisms, we used the number EC 3.1.2.23 to search for more information about this enzyme.
