

**Name:** 30S ribosomal protein S10

**Function:** Involved in the binding of tRNA to the ribosomes.

**Source:** In order to analyse this protein we searched on Uniprot where we found the protein with the Entrez B2S2D5, where we have the information of the Subcellular Location : ribosome.

As we have the Swissprot number on this protein we searched in NCBI for more information or references. We could just confirm that this was really our protein, but no further informations were found.
