

**Name:** DNA-directed RNA polymerase subunit alpha

**Function:**

We just have the information described on source

**Source:**

We searched on NCBI with the accession number obtained and confirmed on Uniprot our Blast results:

GO - Molecular function:

structural constituent of ribosome Source: InterPro

GO - Biological process:

translation Source: UniProtKB-HAMAP

We found also information about the interaction with other structures:

Part of the 50S ribosomal subunit. Contacts protein L32 This protein has a subcellular location in the ribosome.

Score of 2 out 5 "-Protein inferred from homology"
