

Name: 50S ribosomal protein L16

Function: Binds 23S rRNA and is also seen to make contacts with the A and possibly P site tRNAs.

Source:

Searching on uniprot with the accession number obtained by our blast we found some information, confirmed searching with our protein ID

Part of the 50S ribosomal subunit.

We have also the information of the Subcellular location, ribosome.

Score of 2 out of 5 “-Protein inferred from homology”
