

**Name:** exodeoxyribonuclease III

**Function:** Exodeoxyribonuclease III (ExoIII) is involved on DNA processing. This protein catalyses the exonucleolytic cleavage in the 3'- to 5'-direction to yield nucleoside 5'-phosphates.

The superfamily (EEP) of this protein is described on CDD.

**Source:** This protein doesn't have a Swissprot number in NCBI page. We did the BLAST against Swissprot database but the e-values were too high to be considerate.

Glycerol-3-phosphate O-acyltransferase protein is described on Brenda, in many different organisms, we used the number EC 3.1.11.2 to search for more information about this enzyme.
