

Name: 50S ribosomal protein L29

Function: Molecular function:
structural constituent of ribosome

Source:

Searching on uniprot with the accession number obtained by our blast we found some information, confirmed searching with our protein ID

The information obtained is limited, as the amount of annotation on this protein is really short.

We have also the information of the Subcellular location, ribosome.

Score of 1 out of 5 “-Protein inferred from homology”
